

MACROMEDICS®

OmniBoard

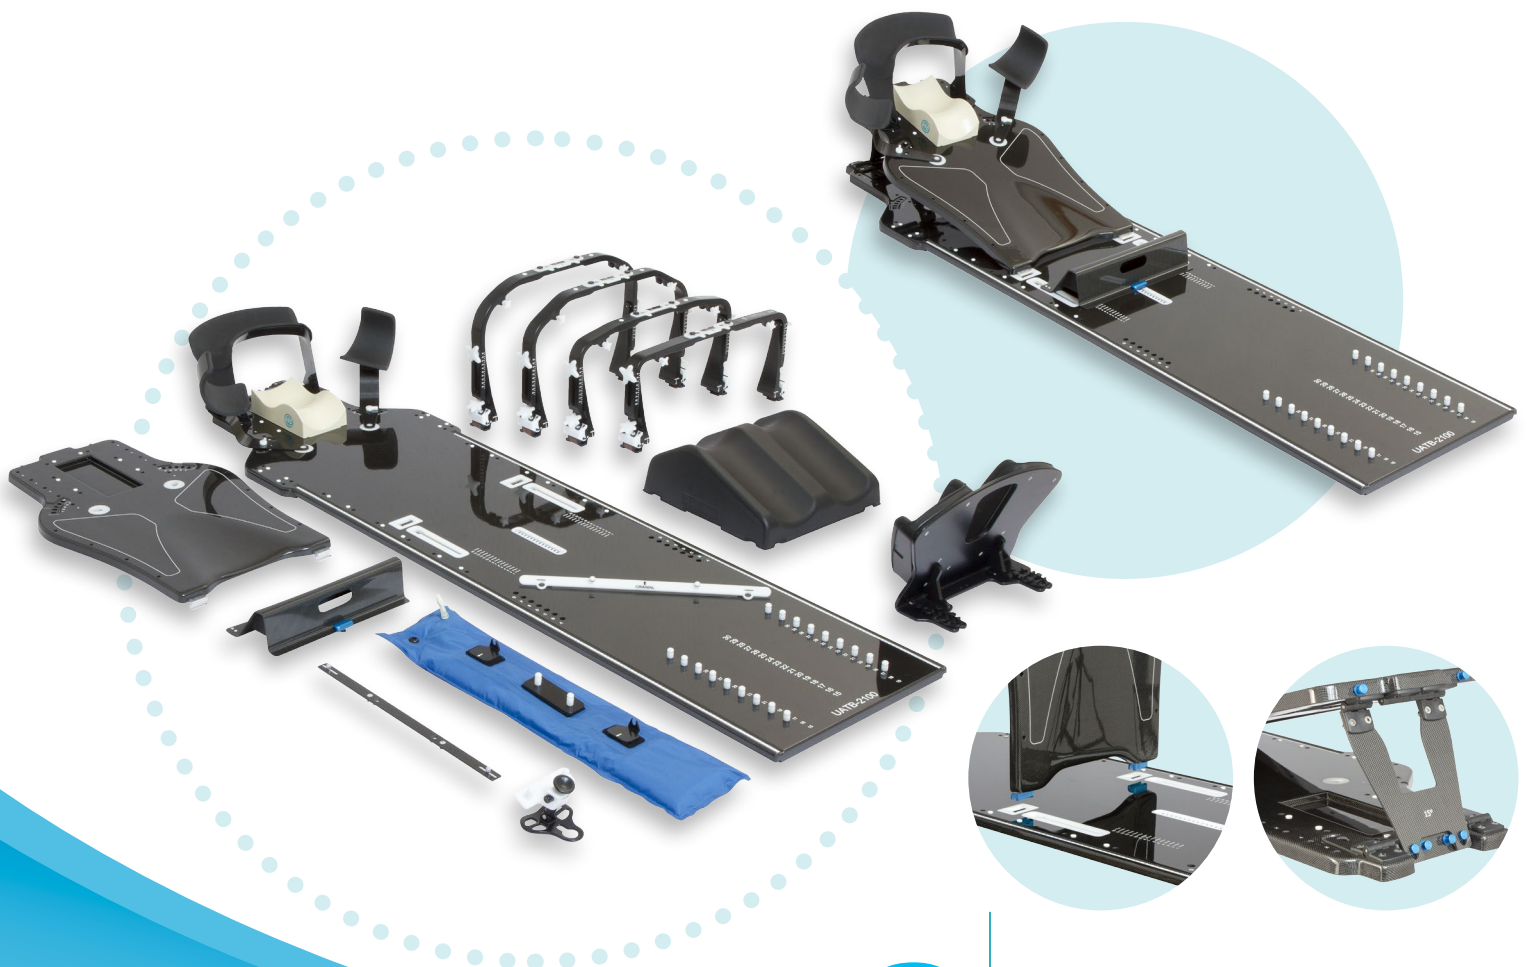

The OmniBoard™ is the most versatile and advanced Modular Treatment Board of the new MACROMEDICS® Patient Positioning Platform.

The OmniBoard offers unprecedented flexibility and accuracy in patient set-up. The OmniBoard Base can remain on the treatment couch during daily treatment and provides precise patient positioning for all treatment areas. With use of the modular MACROMEDICS positioning products the OmniBoard becomes a dedicated device for head- and neck, lung, breast and thorax, liver and lower abdomen as well as SBRT treatments.

The OmniBoard offers maximum versatility when used with the unique detachable Breast Treatment Module. The Module is extremely light weight and has a comfortable 3D anatomical contoured design with optimized dosimetric properties. It can be easily attached to the OmniBoard Base within seconds and provides 3 treatment angles. A detachable indexed bottom stop provides a rigid and secure patient support. The arm supports for breast, thorax and lung treatment are quickly transferable between the OmniBoard Base and Breast Treatment Module.

By adding the MACROMEDICS Secure Arches the OmniBoard can be transformed to a state of the art SBRT Patient Positioning Platform for precise and accurate stereotactic treatments. The Secure Arches are available in 4 different sizes and can be customized with a respiratory suppression plate or vacuum cushions.

The OmniBoard is the first genuine "All in One" patient positioning solution available for radiation treatment!
